IMPULSE PEMF

The Curatron FLASH systems are very high intensity IMPULSE PEMF devices. The high-intensity impulse system builds up power like a bucket filling with water, then dispenses it all at once, creating a very short PEMF pulse. FLASH systems are very high power, short exposure, PEMF devices.

PEMF Therapy Professional Therapists

The ultra high intensity of the ULTRA-FLASH pulse creates short electromagnetic pulses of a few hundred microseconds, which is less than 1/1000 of a second. Each individual ultra high intensity pulse will fully penetrate the body in, and around, the coil location. The Curatron Flash generates ultra high intensity Pulsing Electro Magnetic Fields applied via one or two of the available applicators. Using two applicators simultaneously divides the generated energy, dependent on the applicators used.
